

Common Data Framework Case Study | Ahold Delhaize

2025

With the support of

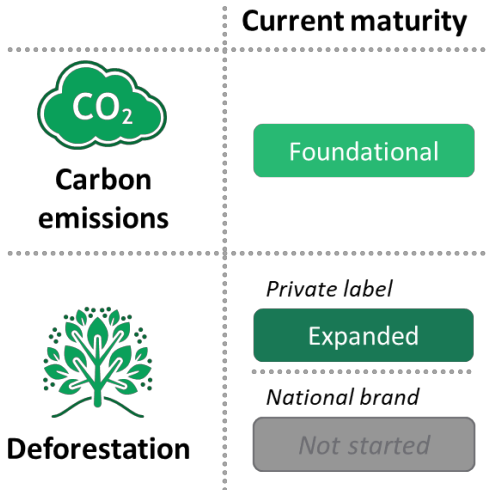

The CDF identifies reporting requirements to support your goals

The Common Data Framework serves as a bridge from current capabilities to future impact:

1

Meets you where you are

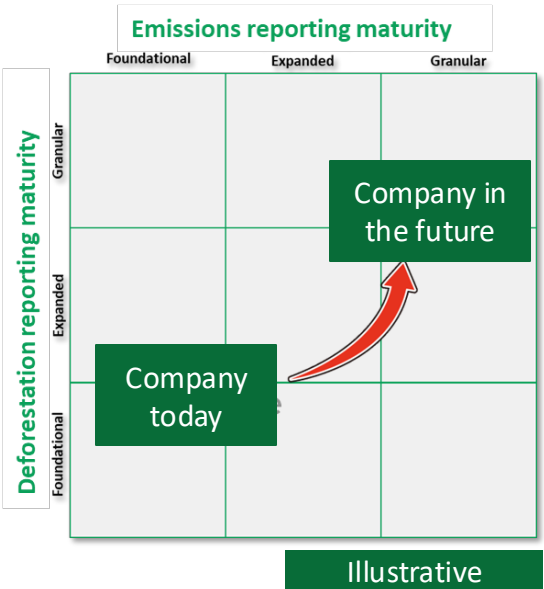

Recommends right data granularity for your current use cases

2

Helps chart your path forward

Anchors your future maturity in desired use cases and ambitions

3

Flags your reporting needs

Identifies reporting depth required to meet your goals

Future maturity	Reporting level
Private label	Private label: Product Carbon Footprints
Granular	
National brand	National brand: Spend mapped to supplier- specific factors where available
Expanded	
Total store (EUDR)	Total store (EUDR)
Granular	Geolocation
Private label (Other)	Private label
Expanded	3 rd -party cert.
National brand	National brand
Foundational	Self-certified

How they started | established a foundation for voluntary commitments

Why they started

Voluntary commitments

Motivated to collect data to support its voluntary standards, including aligning to SBTi net zero

Common Data Framework alignment

	Use cases	Reporting level	Maturity
 Carbon emissions	Establish emissions baseline to support SBTi Net Zero standards	Baseline built using internal spend and activity data aligned to category average emissions factors; no supplier data collected	Foundational
 Deforestation	Offer product transparency and mitigate risk in private label products for six high-risk commodities	Own brand suppliers share 3rd-party certification on six high-risk commodities	<i>Private label</i> Expanded <i>National brand</i> Not started

Note: category average emissions factors aligned to GHGP; 3rd-party certifications from Type 1 or Type 3 ecolabels

What’s next | demonstrate progress against SBTi and comply with EUDR

Why their strategy is evolving

Voluntary commitments

Demonstrate reductions against SBTi baseline to alignment to Net Zero Standard and total store deforestation

Regulatory requirements

Collect data to comply with EUDR regulation

Common Data Framework alignment

	Use cases	Required reporting level	Target maturity
 <p>Carbon emissions</p>	Demonstrate reductions against SBTi baseline through detailed private label reporting and close collaboration with supply chain on National Brand	Private label: Product Carbon Footprints National brand: Spend mapped to supplier- specific factors where available	<i>Private label</i> <div>Granular</div>
	 <p>Deforestation</p>	Ensure compliance with EUDR Ensure private label DCF products Progress on DCF sourcing in line with AFI guidance	Total store (EUDR): Traceability with geolocation for seven high-risk commodities Private label: Credible 3 rd party certification National brand: Self-certified DCF
			<i>Total store (EUDR)</i> <div>Granular</div> <i>Private label</i> <div>Expanded</div> <i>National brand</i> <div>Foundational</div>

Note: PCFs and supplier-specific emissions factors validated by credible third-parties; traceability built in conjunction with dedicated and reputable traceability partners

Thank you
